### Introduction: Fixed Point Analysis

Given the system of differential equations:

$$y' = f(y)$$

#### Definition

A fixed point  $y^*$  is defined by  $f(y^*) = 0$ .

- Solve the equation f(y) = 0
- Analyse eigenvalues of the Jacobian at fixed points.

Now: System with controle parameter  $\mu$ .

$$y' = f(y, \mu)$$

How does  $\mu$  influence the number, location and stability of fixed points?

## Elementary flux mode

For  $v \in R$
